ABSTRACT

An online voting system aimed at modernizing the electoral process and enhancing democratic participation. With the ever-growing demand for accessible, efficient, and secure electoral processes, the adoption of digital platforms has become imperative. The proposed system offers a comprehensive solution by harnessing the power of technology to facilitate remote voting while maintaining the integrity and confidentiality of the electoral process. The system is designed to be user-centric, with a focus on usability and accessibility. Through a web-based interface, voters can securely cast their ballots from any location with internet access, eliminating the barriers of physical presence and enabling broader participation.
